

ADDITIONAL RULES FOR TDI TESTING

1. Dogs must be tested on a plain buckle collar or harness. Training collars, training harnesses, halties or any other corrective training devices are not permitted during testing or visiting as a TDI registered Therapy Dog.
2. Dogs must be a minimum of one year-old to be tested.
3. Greyhounds are not required to sit for TDI Testing.

Note: Potential applicants are not required to take any therapy dog classes, which are not sanctioned by TDI.

TDI ADDITIONS TO THE AKC'S CGC TEST

TDI registration is a natural extension of the AKC-CGC for dogs who are particularly sensitive and attentive to people. Canine membership includes all breed and mixed-breed dogs. All dogs are tested and evaluated for Therapy Dog work by Certified TDI Evaluators. While many dogs provide love and companionship in the home, not all dogs are qualified or have the temperament suited to be a Therapy Dog.

TDI

TESTING REQUIREMENTS

WHICH INCLUDES SOME STEPS OF THE

AMERICAN KENNEL CLUB'S
CANINE GOOD CITIZEN
TEST®

Therapy Dogs International, Inc. is an organization dedicated to the regulation, testing, selection and registration of qualified dogs and handlers for the purpose of visitations to hospitals, nursing homes and facilities or any place where therapy dogs are needed.

DEMONSTRATING CONFIDENCE AND CONTROL, THE DOG MUST COMPLETE THESE 10 STEPS OF THE AKC/CGC TEST® AND THE ADDITIONAL TDI REQUIREMENTS WHICH INCLUDE TEST #11.

(Note: At check-in, before beginning Test 1, the owner must present a current rabies certificate and any other state or locally required inoculation certificates and licenses.)

TDI additions to the AKC-CGC Test are in italics and printed in red.

TEST 1: ACCEPTING A FRIENDLY STRANGER

This test demonstrates that the dog will allow a friendly stranger to approach it and speak to the handler in a natural, everyday situation. The Evaluator and handler shake hands and exchange pleasantries. The dog must show no sign of resentment or shyness, and must not break position or try to go to the Evaluator.

The dog must be tested around medical equipment (such as a wheelchair, crutches, cane, walker, or other devices which would ordinarily be found in a facility) to judge the dog's reactions to common health care equipment. At the discretion of the Evaluator, this part of the test may be included in any of the following tests: 2, 3, 5 or 9

TEST 2: SITTING POLITELY FOR PETTING

This test demonstrates that the dog will allow a friendly stranger to touch it while it is out with its handler. The dog should sit at the handler's side as the Evaluator approaches and begins to pet the dog on the head and body only. The dog may stand in place to accept petting. The dog must not show shyness or resentment.

TEST 3: APPEARANCE AND GROOMING

This practical test demonstrates that the dog will welcome being groomed and examined and will permit a stranger, such as a veterinarian, groomer or friend of the owner, to do so. It also demonstrates the owner's care, concern and sense of responsibility. The Evaluator inspects the dog, then combs or brushes the dog, and lightly examines the ears and each front foot.

TEST 4: OUT FOR A WALK (WALKING ON A LOOSE LEASH)

This test demonstrates that the handler is in control of the dog. The dog can be on either side of the handler, whichever the handler prefers. There must be a left turn, a right turn and an about turn, with at least one stop in between and another at the end. The dog need not be perfectly aligned with the handler and need not sit when the handler stops.

TEST 5: WALKING THROUGH A CROWD

This test demonstrates that the dog can move about politely in pedestrian traffic and is under control in public places. The dog and handler walk around and pass close to several people (at least three). The dog may show some interest in the strangers, without appearing overexuberant, shy or resentful. The handler may talk to the dog and encourage or praise the dog throughout the test. The dog should not be straining at the leash.

TEST 6: SIT AND DOWN ON COMMAND/STAYING IN PLACE

This test demonstrates that the dog has training, will respond to the handler's command to sit and down, and will remain in the place commanded by the handler (sit or down position, whichever the handler prefers). The handler may take a reasonable amount of time and use more than one command to make the dog sit and then down. When instructed by the Evaluator, the handler tells the dog to stay and walks forward the length of a 20-foot line. The dog must remain in place, but may change positions.

TEST 7: COMING WHEN CALLED

This test demonstrates that the dog will come when called by the handler. The handler will walk 10 feet from the dog, turn to face the dog, and call the dog. The handler may use encouragement to get the dog to come. Handlers may choose to tell the dog to "stay" or "wait," or they may simply walk away, giving no instructions to the dog as the Evaluator provides mild distraction (e.g., petting).

TEST 8: REACTION TO ANOTHER DOG

This test demonstrates that the dog can behave politely around other dogs. Two handlers and their dogs approach each other from a distance of about 10 yards, stop, shake hands and exchange pleasantries, and continue on for about 5 yards. The dogs should show no more than a casual interest in each other.

TEST 9: REACTIONS TO DISTRACTIONS

This test demonstrates that the dog is confident at all times when faced with common distracting situations, such as the dropping of a large book or a jogger running in front of the dog. The dog may express a natural interest and curiosity and/or appear slightly startled, but should not panic, try to run away, show aggressiveness or bark.

LEAVE-IT: The handler with the dog on a loose leash walks past food on the ground (placed within a distance of three feet) and, upon command, the dog should ignore the food. (Please note: TDI does not permit the use of food/treats during actual therapy dog visits.)

ACCLIMATION TO INFIRMITIES: This test demonstrates the dog's confidence when exposed to people walking with an uneven gait, shuffling, breathing heavily, coughing, wheezing or other distractions which may be encountered in a facility.

TEST 10: SUPERVISED SEPARATION

This test demonstrates that a dog can be left with a trusted person, if necessary, and will maintain its training and good manners. Evaluators are encouraged to say something like, "Would you like me to watch your dog?" and then take hold of the dog's leash. The owner will go out of sight for three minutes. The dog does not have to stay in position but should not continually bark, whine, or pace unnecessarily, or show anything stronger than mild agitation or nervousness.

TEST 11: SAY HELLO

The TDI Certified Evaluator will test the willingness of each dog to visit a person and that the dog can be made readily accessible for petting (i.e., small dogs can be placed on a person's lap or can be held, medium and larger dogs can sit on a chair or stand close to the patient to be easily reached.)

The dog must be able to work well around all types of populations, including children. The dog's behavior around children must be evaluated during testing. It is important that during the testing the potential therapy dog and the children are not in direct contact. This means the dog can only be observed for a reaction toward children playing, running or in general present at the testing site. Any negative reaction by the dog will result in automatic failure. Negative reaction means a dog showing signs of aggression.
